

# Automation Consultant vs In-House AI Ops

Cost, speed, and risk tradeoffs for small and mid-market teams

## Direct answer: should you hire a consultant or build an internal AI ops role first?

If you need results in the next 30-90 days, a consultant-led pilot is usually faster and lower risk. If you have a stable automation backlog, internal technical leadership, and budget for ramp time, an in-house AI ops hire can be the right long-term model.

### Quick comparison

Factor	Consultant / SG1-style engagement	In-house AI ops hire
Time to first pilot	30-60 days typical	2-6 months (hire + onboarding + build)
Cost profile (AUD)	Project/pilot spend	Salary + super + on-costs + tooling + management
Execution risk	Lower if methodology is proven	Depends on hire quality and scope control
Institutional knowledge	Needs documentation transfer	Builds internally over time
Best fit	Urgent bottleneck relief and pilot validation	Ongoing automation program at scale

### When a consultant is the better first move

- You need a pilot launched this quarter
- The process spans admin, ops, and client-facing teams
- You want external discipline around scope and ROI measurement
- Your team is busy and cannot spare build/maintenance time

### When an in-house AI ops hire makes sense

- You already have 3-5 validated workflows ready to scale
- You can support tooling, governance, and backlog prioritization
- You have a manager who can coach and retain the role
- You want an internal automation capability, not a single project

#### Hybrid path

Many teams use a consultant for the first pilot and hand over a documented operating model to an in-house hire later.

## Decision checklist before choosing

---

1. How quickly must we show a measurable result?
2. Who owns the automation backlog and prioritization today?
3. What workflows are ready and documented enough to automate?
4. Do we have approval from privacy/compliance stakeholders?
5. Can we support an internal hire with tools, data access, and management?

## Suggested rollout sequence for most SMB/mid-market teams

---

Phase	Approach	Outcome
Phase 1	Consultant-led pilot	Validate ROI and control model
Phase 2	Consultant + internal owner	Documented processes and handover
Phase 3	In-house AI ops hire (optional)	Scale across more workflows

## Next step

---

If you are deciding between a pilot engagement and internal hiring, compare this with our [pilot-first vs full transformation guide](#) and the [pilot ROI methodology](#). AU teams should compare this against expected hiring lead time and retained capability needs.
